Where can I get them? <input type="checkbox"/> Exchange 2003 with SP2 or above and all the latest updates applied. Where can I get them? <input type="checkbox"/> Any version of Exchange released after January 2006
Note:
<ul style="list-style-type: none"> Integration with Exchange 5.5 is NOT possible if SP4 is not installed. Integration with other versions of Exchange may work even if the latest service packs are not installed, but some functionality may error or be unavailable. For best results, please ensure you have applied the latest service pack and all updates.

SMTP Server
If you use SMTP to process email, please ensure that ALL of the following are in place
<input type="checkbox"/> You must know your mailbox security credentials. Contact your email administrator. <input type="checkbox"/> Your server must allow relaying. Contact your email administrator.

Windows (NT) Service Scheduler
MARS installs an application scheduler by default. If you wish to use the Windows (NT) Service scheduler you can do so by going to Options – Scheduling. You must ensure ALL of the following:
<ul style="list-style-type: none"> The Windows Service user has full security rights to the mailbox to be used (if you will be emailing reports). The above user has full security rights to network files and folders (if you are reading reports across the network and if you are exporting to network folders). The above user has full security rights to any FTP location you may be exporting to. The above user has “Log on as service” rights on the local PC. The above user has “Act as part of the operating system” rights on the local PC. The above user is a local administrator (or a member of the local administrators group) of the PC. <p>Contact your system administrator.</p>

Important things you should know about MS Access and MARS
<ul style="list-style-type: none"> MARS has been developed to save you the time and energy in creating your own custom report distribution application. Buying MARS is the equivalent of hiring a competent developer to develop a report distribution application for you using your own licensed MS Access components. MARS does not come with Microsoft components (dlls) included. It will interface with these components if they exist on your PC. The components are required by MARS in order to read your Access Reports, queries & macros, run them and export them. You must obtain the components yourself by buying and installing a copy of Microsoft Office from your regular software supplier, or from Microsoft. Make sure you visit the Microsoft Office website and update your installation of Office with ALL the service packs and updates that have been released for your version of Office.
