

ChristianSteven Software Deactivation Guide

Please read this page carefully if you have a single installation license and wish to:

- ▶ Move SQL-RD to another PC

Moving the schedules and system data

From SQL-RD on the **old** PC, do the following:

1. Go to System -> Backup System.
2. Backup the old system to a shared folder on your network.

On the **new** PC, do the following:

1. Go to System -> Restore System, using the backup file on the shared folder.
2. Check and make and required changes to your configuration if necessary and check if everything is fine.

Moving your license

1. In SQL-RD on the old PC, go to Windows Start-> Programs->ChristianSteven->SQL-RD->License Transfer Wizard
2. Follow the wizard steps to complete the transfer.

Important: Do NOT run the Registration & Activation wizard on the old PC. You will simply receive an activation code which is good for the OLD PC and will **NOT** work the new PC. To activate the **NEW** PC you must run the wizard on the **NEW** PC.
